

MEIT Quality Assurance

MEI Technologies' (MEIT) commitment to its customer focused, performance driven quality policy begins at the highest level of management who are committed to the implementation of the Quality Management System (QMS) to meet or exceed customer requirements through proven work methods including ISO, AS9100 and CMMI and delivering what we promise with flexibility, quality and integrity. Our CEO, Edelmiro Muñiz, leads our commitment to excellence and continuous improvement by emphasizing exceeding customer expectations, highest quality, low cost, innovation and inclusion, safety, technical excellence and high ethical standards. MEIT's high degree of customer satisfaction with our products and services is attributed to our highly skilled people, proven processes and continuous improvement at the corporate and program levels.

MEIT's QMS provides a robust framework for monitoring and maximizing quality on SeaPort-e task orders. To ensure consistent quality performance, work processes for each contract and task are documented and the pertinent performance measurements associated with each process are defined. These metrics address such key factors as cost (budget), schedule, work volume, and work quality. Performance against each metric is tracked as an integral part of our work activities, and real-time status information is maintained in our performance management systems so customers and managers can have up-to-date information on all tasks.

MEIT maintains certifications in ISO 2001:2008, AS9100C and CMMI® Maturity Level 3.
